Skills

Languages:

Java · Python · JavaScript · TypeScript · SQL

Backend:

FastAPI · Node.js · Express.js · SQLAlchemy · Pydantic · REST APIs · Alembic

Auth & Security:

Clerk · JWT · RBAC

Testing:

pytest · httpx · Dependency Injection · SQLite Test DB

Frontend:

React · HTML5 · CSS3 · Vite

Databases & Cache:

PostgreSQL · MongoDB · Redis · SQLite

DevOps & Tools:

Git · GitHub Actions CI · Docker · Vercel · Render · Upstash

Projects

SyncBoard — B2B SaaS Task Management

Tech — React 19 · TypeScript · Python · FastAPI · PostgreSQL · Redis · WebSockets · Clerk · GitHub Actions CI · Vercel · Render

- Multi-tenant Kanban SaaS where teams manage tasks in real time — **Clerk JWT authentication** with **org-scoped RBAC** ensuring users only access their organization's data.
- Real-time collaboration via **WebSockets** with per-org broadcast channels and **optimistic UI** updates with automatic rollback on API failure.
- Reduced DB load using **Redis caching** with auto-invalidation and **graceful fallback** — app stays fully functional even when cache goes down.
- Full observability with **structured audit logging**, field-level diffs, **Recharts** analytics dashboard, and paginated activity feed.
- 28 **pytest** tests, **GitHub Actions CI** pipeline, **Alembic** migrations, deployed on **Vercel + Render + Upstash**

PrepWise AI — AI-Powered Interview Preparation Platform

Tech — React · Node.js · Express.js · MongoDB · JWT · Google Gemini 2.0 API · Tailwind CSS

- Built full-stack MERN interview prep platform integrating **Google Gemini 2.0 API** to generate role-specific technical questions and AI-powered answer explanations.
- Implemented **JWT authentication** with secure login/signup flow and **MongoDB** session persistence — users can save, organize and revisit previous interview sessions.
- Designed **role-based question generation** — questions tailored to job role and experience level using Gemini AI, improving relevance and practice quality.
- Optimized frontend performance with **React Query** for data fetching, lazy loading to reduce initial load time, and **Context API** for global state management across the application.
